

Stock Market Analysis Project

By Tushar Harane

Introduction

This project aims to analyze and identify stocks based on various financial metrics and indicators. By leveraging data extraction and analysis techniques, we can provide insights into stocks' trading volumes, volatility, dividends, P/E ratios, market capitalization, and buy/sell signals.

Data Operations

Data Source

Utilize a .csv file containing past years' stock market data for comprehensive analysis.

Data Cleaning with Power Query

- **Import Data:** Seamlessly import the .csv file into Power Query for efficient data processing.
- **Remove Duplicates:** Ensure data integrity by identifying and removing duplicate values.
- **Handle Missing Values:** Replace null or missing values to maintain data consistency.
- **Format Data Types:** Standardize and format data types for accurate analysis and processing.
- **Create New Columns:** Derive necessary columns from existing data to facilitate targeted analysis and insights.
